Preface

Hi, Thank You for choosing and believing! :)

I am a user manual, let me tell you how to use PU50 ultrasonic dog training anti barking device correctly.

PU50 ultrasonic dog barking deterrent device, which uses the principle of ultrasound to emit soundwaves to interfere with the dog, so that it will feel stimulated and stops the current behavior. For example, you can expel a dog who is coming to you, or effectively train your dogs to stop unwanted behaviors like barking, digging, clawing, biting, scratching, and getting on furniture, easy peasy.

The anti barking device PU50 uses a frequency of 22-25KHZ, which is difficult for human hearing to perceive, but it is the most sensitive frequency for dogs.

But the sound will not negatively affect the dog's hearing or health, it is an effective and safe product!

1 x Wrist Strap

1 x Instruction Manual

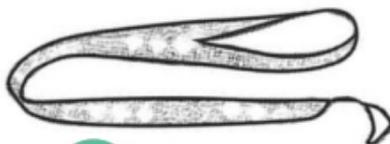

1 x Clicker with Wrist Strap

1 Dog bark control device

2 USB Cable

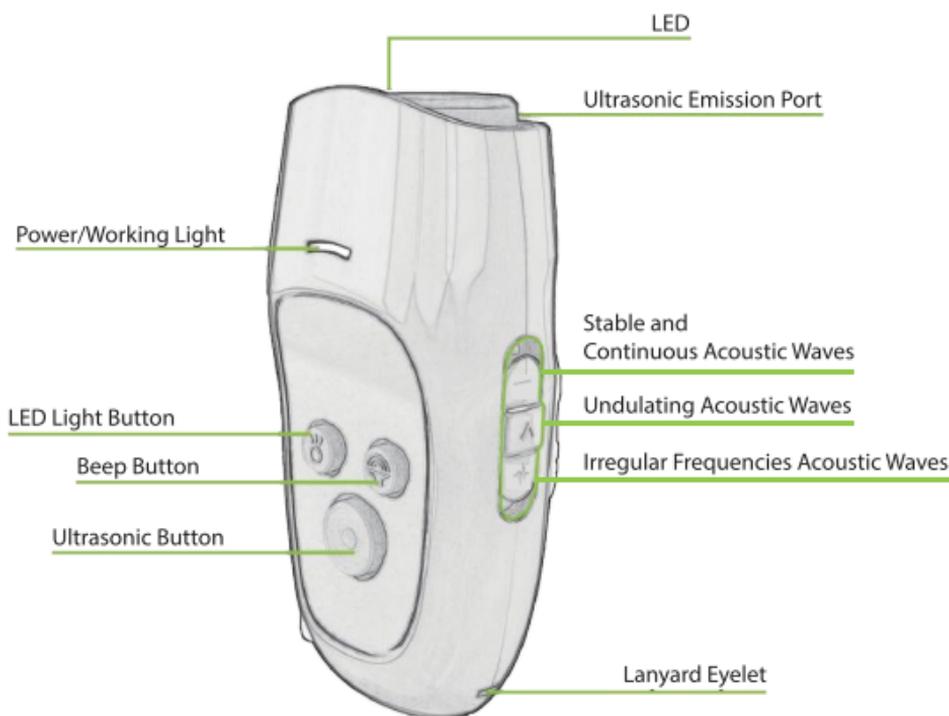

3 Wrist Strap

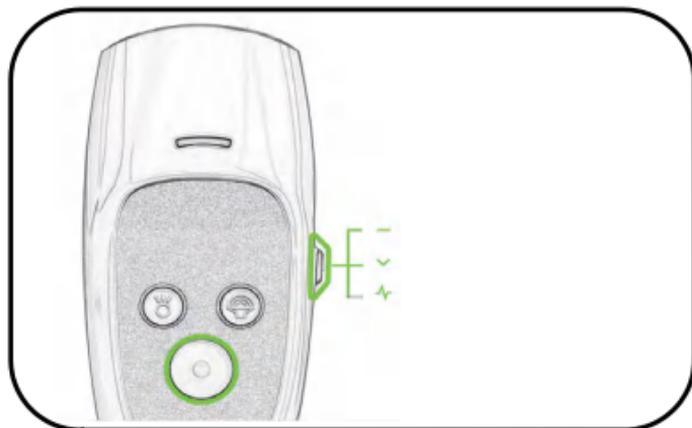

4 Clicker

Ultrasonic Bark Control

Product function

1. Usage of Ultrasonic

The side push button has three different sound wave modes, which are initiated by 22-25KHZ.

- Stable and continuous sound waves
- ✓ Undulating sound waves
- ⚡ Sound waves with irregular frequencies

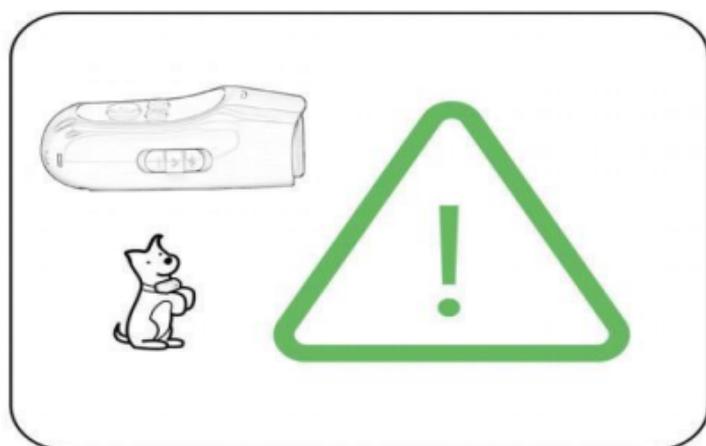

After selecting the sound wave mode, please press the launch button, it will directly send out ultrasonic waves. The animal's hearing will become immune to a certain sound after a long time of adaptation, so multiple sound waves can prevent dogs from being immune to a certain sound wave. It can extend the effective usability of the product,

so you can use different sound waves alternately in each period of time.

The working distance of PU50 ultrasonic dog bark silencer is 5 meters, which is better for indoor use.

NOTE: It's normal if you cannot realize the sound wave changes since man cannot hear this ultrasound.

2.Usage of Warning Tone

Beep sound, you can use it before each use of ultrasound, so that some dogs can be conditioned to reflect, and they will react after hearing the BEEP sound. The Beep mode can combine with your usual dog training instructions. For example, when press the BEEP button to call your dog every time , and then you can give a reward. After multiple uses, the BEEP sound will become the sound of calling the dog.

3. LED Mode

Click the LED button, this can turn on your LED light, which can be used for lighting when you walk your dog outdoors at night.

Long pressing the LED button without releasing it, it will flash quickly, which can be used as a reminder and warning to the dog. If combined with ultrasound, the PU50 ultrasonic device could be a good helper for you to stop your dog from bad behaviors in a timely manner.

4. Indicator Light.

The product will keep flashing green light in standby mode. When the play button is pressed, the green light.

Battery

1. When the device shows low power, please charge it as soon as possible.
2. After fully charged, please remove the power supply as soon as possible to avoid prolonged charging.
3. When the battery is damaged, do not repair or disassemble it.

4. This product uses a 300 mAh battery.
5. Charging time is about 2 hours.
6. Using time is up to 12 days.
7. Standby time is up to 15 days.
8. Do not use adapters larger than 5V2A to charge the product.
9. Do not immerse the product in water or extreme environments (below 0 °C or above 45 °C).

FAQs

Question:

How to recognize that the Nzonpet anti-barking device is in working condition?

Answer:

1. There are three buttons on the device, the small button on the left is a light button; on its right one is a beep function button. There is a bigger button below these two the ultrasonic button.

2. Light button: There are two ways to use it; a short press or a long press. It will emit a long bright light when short press, and a burst flashing when long press.

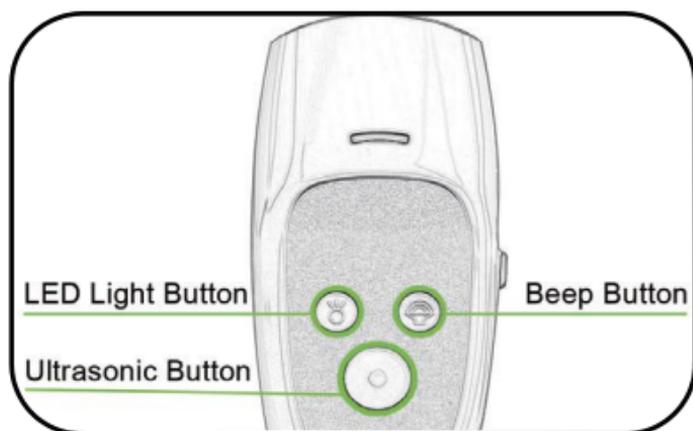

The working status includes: the green indicator light is on and the bright LED light is on.

Beep button: Press the button to turn it on, and release to turn it off.

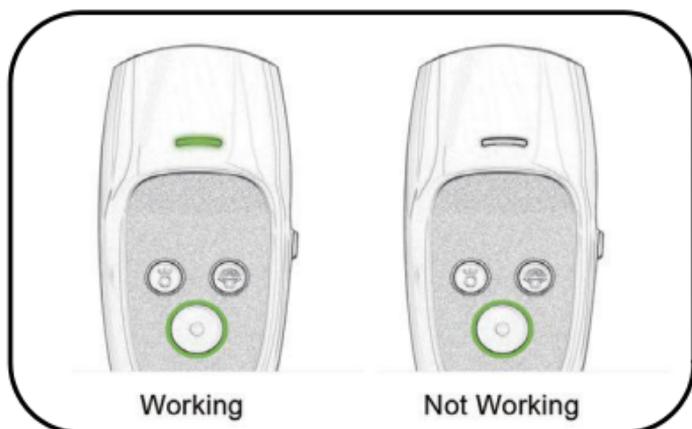

The working status includes: the green indicator light is on with an audible beep.

Ultrasonic button: Press the button to turn it on, and release to turn it off.

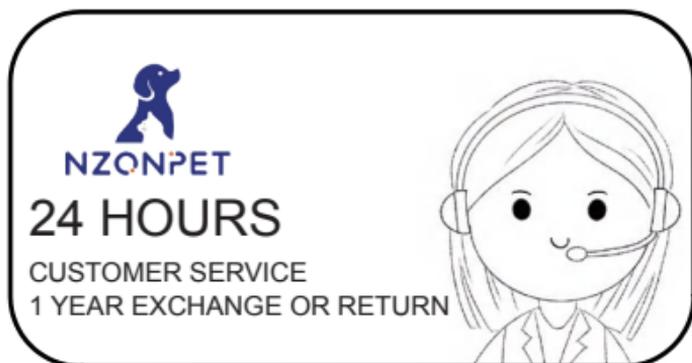

The working status includes: the green indicator light is on.

3. Green indicator light: The green indicator light is for responding to every device's activity if it counts. The indicator light will not blink if any action does not count.

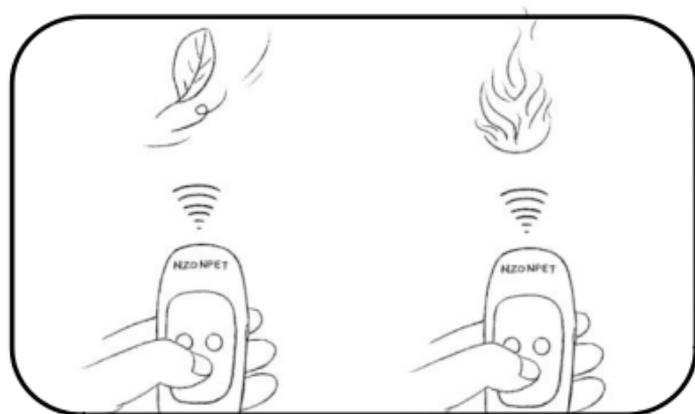

4.First, Try a test to make sure the green indicator light is ON when you press any button, which means the device is working perfectly. If the indicator light does not light up, please contact us at support@nzonpet.com.The professional customer service team will have a dedicated customer service staff to solve it.

5.Testing the ultrasonic working status: Make sure the green indicator light is on when you press the ultrasonic button.

Aim the ultrasonic wave at the leaves under no wind conditions. The leaves will be affected by the airflow generated by the ultrasonic wave and slightly swing to prove that the ultrasonic release is normal.

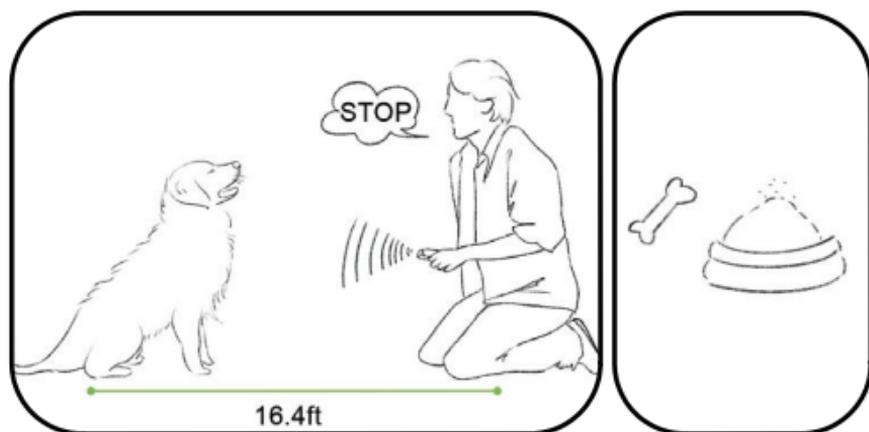

In a windless condition, aim the ultrasonic wave at the candle flame. The candle flame will be affected by the airflow generated by the ultrasonic wave and slightly oscillate, which can also prove that the ultrasonic wave is normally released.

Suggested operation method

Ultrasound is emitted linearly. So it is recommended to press the ultrasonic button at the appropriate distance (16.4ft) and in an open environment without obstacles. Press the ultrasonic button directly at the dog's position, and use hand signals and commands simultaneously. Such as " Stop, sit down."

Once your fur baby responds to your signal or commands, please remember to give your pet an appropriate reward, such as snacks, petting, etc., to guide and strengthen the dog's memory actively.

Notice

1. Use of this product means you accept all the terms and conditions.
2. This product cannot be applied to dogs with strong anti-defense and has no effect on older or hearing-impaired dogs.
3. Different dogs may have different responses to sound waves. For best results, you can use this product with other training tools and instructions together.

4. This product is a professional dog training device and cannot be used for other purposes. Please do not violate local laws by using this product.

5. We are not responsible for any direct or indirect damages caused by use or misuse of this product, all risks in using this product are the responsibility of the user.

6. The conditioned reflex of the dog usually takes 3-10 days to form, adapt and consolidate. During this period, please form, adapt, and consolidate. During this period, please continue to train the dog patiently. If you can't achieve the results you expect, please contact our professional customer service **support@nzonpet.com**, we will get in touch with you within 24h and will do our best to assist you to get the best usage of the products.
